Portfolio

Zyrian Michael Gantuangco

Full stack web developer looking to use my skills and knowledge in a professional setting. Determined and motivated self-starter, with experience in all phases of agile software development. Primarily focused on building single-page applications using Angular, but always willing to learn new technologies.

SKILLS

FRONT END
- HTML
- CSS
- Sass
- Javascript
- ES6
- Typescript
- Angular
- Bootstrap

BACK END
- SQL
- Node
- Express
- GIT
- Java
- Docker
- Python

EDUCATION

Stockton University, Galloway NJ

DEC 2016

Bachelors of Science, Computer Science

EXPERIENCE

Miles Technologies, Lumberton NJ — *Software Support Specialist*

APRIL 2017 – SEPTEMBER 2019

- Gained experience in all phases of agile software development using Jira and Gitlab/Github
- Worked with multiple teams to design and implement application requirements
- Worked closely with development to understand features and provide extensive information to developers to resolve issues quickly
- Made data adjustments and reports through SQL scripts and stored procedures
- Improved front end aesthetic of a high-volume progressive web application, resulting in a 15% increase in site performance
- Made application updates using HTML, CSS, and Bootstrap, then pushed them through a CI/CD pipeline
- Resolved technical problems relating to the business-critical customers-facing portal resulting in system performance and scalability improvements
- Created up-to-date documentation for easy reference and to keep entire team updated on new features/changes
- Performed integration and regression testing to check the compatibility of new functionality with existing functionalities of customer applications

PROJECTS

WARFRAME CODEX — *Github*

GOAL - To create a single-page, external codex/information resource for the video game, Warframe
- Mimic Wikipedia/Wikia structure, letting users sign in to add/edit records.

TECH STACK
- HTML, CSS, Bootstrap, and Angular front end
- Express, Sequelize, and Node back end

TRAINING RATER — *Github*

GOAL - Application to track course schedules and let users leave their individual ratings

TECH STACK
- HTML, CSS, Bootstrap, and Angular front end
- Express, Sequelize, and Node back end
